The ER-DECOR - Story

The founder Rony Eggermont was already stuck on trains as a child at the age of five. This highly influenced his professional career, and the history of ER-DECOR.

- 1991 Rony Eggermont founded and registered his company : Euro-Rail Imex. This was the start of the manufacturing of model railway accessories, more specifically landscape products. The first grass mats, lichen and scatters came onto the Belgian market.
- 1992 Expansion to new markets in the Netherlands and France.
- 1994 Start up of in-house production line for grass mats. The launch of the highly innovative top product ER-HYDROFIBRE.
- 1995 Start of export to Japan with supplies of grass mats for a well-known Japanese train manufacturer.
- 1996 New premises were a high priority and the business was moved to a new 90 m² warehouse.
- 1997 Expansion into the coveted German market.
- 1999 Due to sales on the German market the turnover increased to such a degree that we moved to 150 m² accommodation.
- 2000 After a long 8 year period on the waiting list, ER-DECOR obtained its first stand space at the International Toy Fair in Nürnberg. For several countries in Europe and internationally, importers and distributors for ER-DECOR were found. The first full catalogues were printed.
- 2002 The number of products, sales and new markets grew rapidly, therefore we required further warehouse space to fulfil the expanding order book. Larger accommodation of 200 m² was acquired.
- 2003 Official name change from Euro Rail Imex to ER-DECOR International.
- 2004 ER-QUICK Track Bed was born, a revolution in the evolution of laying track, this is THE innovation.
- 2005 The increase in sales and products and the will to develop an efficient customer service saw us move to new premises of over 500 m².
- 2006 Independent representatives for Germany and France are employed.
- 2009 We work further on new products to make the ER-DECOR product range as attractive as possible for the model railway enthusiast.

ER-DECOR is there for you!

The printed catalogue is only for information in the short term. New releases and innovations are not always shown in the catalogue.

For this reason our website www.er-decor.eu is at your service as a source of up-to-date information.

Our website is constantly updated and you can find not only the complete ER-DECOR product range in the form of an on-line catalogue, but also instructions for use and vast product information: tips showing how and where to use, list of dealers, exhibition data and even more.

ER-NATURAL

ER-FILITREE Natural fine scale deciduous trees

- ◆ Is a natural plant material with very fine branches (filigree).
- ◆ Is also known as sea moss or sea foam.
- ◆ Remains particularly elastic because of special treatment and impregnation.
- ◆ Is specially treated to allow for possible re-working or damage over time.
- ◆ Is carefully sorted and packed in different lengths.
- ◆ Can be easily cut in the desired form and size with scissors.
- ◆ Trees can be flocked in the desired shades to obtain a realistic appearance (see page five and on our website www.er-decor.eu).

ER.2000
- Mini-Pack, 14 cm high, ca. 8 pcs.

ER.2003 - Maxi-Pack Assorted, ca. 35 pcs.

ER.2002
- Medium-Pack, 20 cm high, ca. 12 pcs.

ER.2004
- Giant-Pack ca. 30 cm high, 3 or 4 pcs.

ER.2005
- N-Pack, 7 cm high, ca. 20 pcs

ER.2010
- Flock-Pack, 20 cm high, ca. 12 pcs.

ER-NATURAL

ER-FILITREE Forming and flocking

In its natural form ER-FILITREE doesn't usually appear in the upright form of a tree.

Using a hair dryer to warm the desired area, the tree material can be straightened.

Very carefully and slowly straighten and shape the tree material, hold it for a moment until cooled and the tree material remains in the desired shape.

There are two ways to apply adhesive to ER-FILITREE.

1. Dip the ER-FILITREE in a solution of two parts ER-DECOCOL (white) art.nr. ER.7201 and one part of water.
2. Use spray adhesive.

There are several methods to flock including scatter material, flock & other materials.

Holding the tree in one hand, use your free hand or kitchen sifter/shaker to sprinkle the material on.

A mix of two green colours or green and yellow will create a realistic effect.

ER-NATURAL

ER-FILITREE Natural flocked deciduous trees

The ER-FILITREE ready flocked trees will impress even the most discerning modeller with their fine detailing. The natural structure and fine leaves of ER FILITREE give these trees a very realistic character.

ER.2020
- Deciduous trees, 15 cm high, 2 pcs.

ER.2021
- Deciduous trees, 9 cm high, 3 pcs.

ER.2022
- Poplar, 15 cm high, 3 pcs.

ER.2025
- Deciduous trees green mix, ca. 17 cm high, 4 pcs.

ER.2026
- Deciduous trees light green, ca. 17 cm high, 4 pcs.

ER.2027
- Deciduous trees medium green, ca. 17 cm high, 4 pcs.

ER.2028
- Deciduous trees dark green, ca. 17 cm high, 4 pcs.

ER.2029
- Deciduous trees olive green, ca. 17 cm high, 4 pcs.

ER.2030
- Deciduous trees conifer green, ca. 17 cm high, 4 pcs.

BACKGROUND FIR TREES

BUDGET MODEL FIR TREES

These budget model fir trees are delivered ready to use and can be placed directly on the layout. These firs are ideal for background forestry on large surfaces. Available in Pine Green, larch or snowy.

Fir tree pack 12 pc.

ER.2236 Root base

ER.2246 Pin base

- Background model fir trees,
3 x 5 cm, 3 x 7 cm, 3 x 9 cm, 3 x 12 cm hoch, high

Fir tree MAXI Pack 56 pc.

ER.2237 Root base

ER.2247 Pin base

- Background model fir trees,
14x5 cm, 14x7 cm, 14x9 cm, 14x12 cm hoch, high

Larchenpack 12 pc.

ER.2256 Root base

ER.2266 Pin base

- Background model fir trees,
3 x 5 cm, 3 x 7 cm, 3 x 9 cm, 3 x 12 cm hoch, high

Lärchen MAXI Pack 56 pc.

ER.2257 Root base

ER.2267 Pin base

- Background model fir trees,
14x5 cm, 14x7 cm, 14x9 cm, 14x12 cm hoch, high

Snowy fir trees pack 12 pc.

ER.2238 Root base

ER.2248 Pin base

- Background model fir trees,
3 x 5 cm, 3 x 7 cm, 3 x 9 cm, 3 x 12 cm hoch, high

Snowy fir trees MAXI Pack 56 pc.

ER.2239 Root base

ER.2249 Pin base

- Background model fir trees,
14x5 cm, 14x7 cm, 14x9 cm, 14x12 cm hoch, high

ER-PROFESSIONAL

MODEL TREES WITH WOOD TRUNKS

These model trees with real wood trunks are delivered ready to use and can be placed directly on the layout. The branches of the trees are made from a flexible material, so you can shape the crown to your liking. All model trees with wood trunks are hand made thus they are all different, just as in nature.

ER.2309
- Austrian pine, 14 cm high, 2 pcs.

ER.2312 - Pines, 12 cm high, 1 pcs.
ER.2313 - Pines, 20 cm high, 1 pcs.

ER-WATER

YOUR ONLY LIMIT IS YOUR OWN IMAGINATION !

ER-AQUAGEL

ER-AQUAGEL is an re-usable one component resin, easy to use and economical, that pours, flows and sets to realistically simulate water.

The beautiful thing about ER-AQUAGEL is that if you are unhappy with your first results, you can salvage the water by re-melting it and trying again. Do you like to make afterwards adjustments or details as waves or rapids to form? Simply use a hairdryer to heat up the surface and set the adjustments.

ER-AQUAGEL is used to simulate a realistic imitation of static and moving water, rivers and streams can come to life e.g. mountain rapids, rivers, canals, lakes, pools, ponds, drains etc.

ER-AQUAGEL model water can be melted in a pot on an electric stove. The gel melts at low temperature at about 55°C - 60°C. It turns completely liquid at about 65°C . ER-AQUAGEL can then be poured into place where it will cool and set. Furthermore, because of its high viscosity in melted state, air bubbles are less likely to occur.

ER-AQUAGEL water remains elastic after cooling.

ER.7510

- ER-AQUAGEL 200 ml + ER-Aquaseal 10 ml
crystal clear, re-usable

ER.7512

- ER-AQUAGEL 1000 ml + ER-Aquaseal 25 ml
crystal clear, re-usable

ER-AQUASEAL

A final treatment with a sealer : ER-AQUASEAL is needed as the surface of the AQUAGEL-water cannot be cleaned. In time, dust and other impurities will form an unattractive film.

Small waves can be formed with the sealer ER-AQUASEAL. Thus, small depressions and elevations are created that appear realistically as waves.

The sealer ER-AQUASEAL dries crystal-clear.

ER.7517

- ER-AQUASEAL 120 ml
crystal clear when dry

ER-WATER

YOUR ONLY LIMIT IS YOUR OWN IMAGINATION !

ER-AQUASURFACE

ER-AQUASURFACE is easy to work with, for realistic water design of static water e.g. lakes and rivers, streams, ponds, swimming baths, etc..

ER-AQUASURFACE can be used on every underground. Pour on the previously prepared underground and after some hours the water the water hardened transparent.

ER.7520

- AQUASURFACE 120 ml
for "still water"
crystal clear when dry

ER-AQUAFORM

ER-AQUAFORM ensure in making realistic effects on waters from Aquagel or Aquasurface where a flowing water effect is desired. It makes streams and brooks liquid, lets Boats navigate ER-AQUAFORM is cristal clear when dry.

ER-AQUAFORM is used for the simulation of realistic moving water e.g. waterfalls rapids and waves to. for example, , mountain rivers, lakes, rivers. Easy simulation of bowwaves and backwash by boats. By static water for the simulation of waves e.g. ditches, ponds, swimming pools, brooks, etc.

ER.7525

- AQUAFORM 100 ml
"wild water" and "wave" effects.
crystal clear when dry

ER-AQUAFECT

Working with ER-AQUAFECT ensure you to create fascinating realistic whitecap effects and foam effects. ER AQUAFECT hardens milky transparent and is used for the simulation of realistic rapids and foam waves. Thanks to its thick consistency, is it possible to apply ER AQUAFECT in steep places e.g. waterfalls. To make rapids on a river, apply some stripes ER AQUAFECT and forms the streaky water using a brush. By foam waves, apply a little ER AQUAFECT and sculpt waves.

ER.7530

- AQUAFECT 50 ml
for foam effects "falls" and "foam waves".
milky-transparent when dry

ER-HYDROFIBRE

A RE-USABLE FIBRE BASED MATERIAL FOR ALL TYPES OF LANDSCAPE

Properties:

- ◆ easy to use
- ◆ highly efficient
- ◆ workable up to 18 hours
- ◆ very light
- ◆ blendable with special colours
- ◆ immediately flockable without glue
- ◆ re-useable

ER-HYDROFIBRE gives very realistic results immediately upon application, thanks to its unique formula. ER-HYDROFIBRE can be used for up to 18 hours after mixing. This allows easy re-working and correction. The hardened ER-HYDROFIBRE is extremely light and has great sta-

With the ER-HYDRO-PIGMENTS art.n°. 7150 the base colours of the mix can be individually coloured. On the still wet ER-HYDROFIBRE, grass fibre, trees, lichen, houses or people can be attached without additional glue. The hardened ER-HYDROFIBRE mix can always be re-modelled by moistening with water, even years later.

As an underground former we recommend our ER-LANDSCAPE MEMBRANE art.n°. 7004, because it aids adhesion while drying out and offers optimal stability.

ER-HYDROFIBRE consists of synthetic fibres that are mixed with a specially home formulated glue and water to an easily workable mix. The mix sticks to most clean and grease free surfaces. Any unused mix can be saved for years for later use in its own CLOSED container. After a long time it dries and hardened, but when adding water at the dry ER-HYDROFIBRE you become again a workable mix.

- Hydrofibre rocks on the private modelrailway of Mr. Anne Wtenweerde (NL)

ER-HYDROFIBRE

LANDSCAPE MODELLING PRODUCTS

STARTER PACKS

ER.7110
- ER-HYDROFIBRE Try-out Pack 0,25 m²
 In total 1,5 litre HYDROFIBRE to cover approx. 1 m² area with a layer thickness of about 2 mm.
 Contents: 3 x ER-HYDROFIBRE 0,5 litre sand, granite, red soil. Grass fibres, landscape mat 50 x 50 cm and instruction sheet.

ER.7120
- ER-HYDROFIBRE Starter Pack 0,50 m²
 In total 3 litre HYDROFIBRE to cover approx. 1,75 m² area with a layer thickness of 2 mm.
 Contents: 3 x ER-HYDROFIBRE 1 litre : Sand, granite, red soil. Grass fibres, landscape mat 50 x 100 cm and instruction sheet.

ER.7130
- ER-HYDROFIBRE Maxi Starter Pack 1 m²
 In total 4 litre HYDROFIBRE to cover approx. 2,25 m² area with a layer thickness of 2 mm.
 Contents: 4 x ER-HYDROFIBRE 1 litre : 2 x sand, granite, red soil. Grass fibres, Landscape mat 100 x 100 cm and instruction sheet.

UNDERGROUND CONSTRUCTION

ER-CONSTRUCTOR

These construction sheets are made from extruded polystyrene and are hard yet very light sheets, ideally suited to form underground landscape structures. These sheets will prove popular with novice modellers as they're quick and easy to cut in all sort of forms with a craft knife. The seasoned modeller will also like the advantages of using this material and modular layout builders will welcome it as a light weight alternative to wood construction.

ER.7000

- ER-CONSTRUCTOR
- 2 Underground construction sheets
- 62,5 cm length, 60 cm width, 2 cm thick

ER.7001

- ER-CONSTRUCTOR
- 1 Underground construction sheets
- 62,5 cm length, 60 cm width, 2 cm thick

ER.7002

- ER-CONSTRUCTOR
- 1 Underground construction sheets
- 31,5 cm length, 30 cm width, 2 cm thick

ER.7005

- Landscape membrane 2 m²
- We recommend using light weight white fibre matting together with the ER-CONSTRUCTOR construction sheet as the HYDROFIBRE will adhere better as it dries, thus ensuring optimum stability.

ER.7006

- ER-Aluminium wire netting 75 x 80 cm
- Aluminium wire-netting is another easy method to form a base for ER-HYDROFIBRE. Aluminium wire netting can be fixed to the baseboard or ER-CONSTRUCTOR construction sheet with a hot glue gun or on wood profiles with staples.

The cost saving solution for easy landscaping

ER.7008

- Landscape crepe paper
- 95 x 120 cm

ER.7007

- Modelling plaster roll
- 300 x 15 cm

ER-QUICK TRACK BED

THE BEST OF THE BEST AMONG THE TRACK BEDS

The easiest and most realistic way of model building

The ER-QUICK Track Bed: not just a track bed !

ER-QUICK Track Bed: realistic, versatile, fast, easy to use, one of the most versatile products available for modelling scenery.

This material is primarily intended for building track beds and for the creation of roads (concrete or asphalt roads). Even light train or tram tracks can be inserted into the roads.

One could say that this is also a perfect solution for the Faller Car-System®. Simply press the guide wire into the road bed, paint in the desired colour, READY ! Or alternatively use very fine grain N-scale ballast to cover the tar surface.

It is also ideal for architectural and military dioramas. Furthermore it is also possible to create walls and hedges with ER-QUICK.

The ER-QUICK Track bed offers several benefits:

- ◆ It will never harden, shrink or dry out
- ◆ It is non-toxic
- ◆ It will not react to or cause any effect to materials such as Styrofoam and Styrene
- ◆ It can be painted
- ◆ It remains flexible indefinitely
- ◆ It is waterproof
- ◆ It is a great sound-deadener
- ◆ It allows track to expand and contract with temperature changes
- ◆ It allows track to be placed without glue, nails or screws
- ◆ It allows ballast to be placed without glue
- ◆ It will stick to wood, plastic, polystyrene, glass, etc.

ER-Quick Track bed is a very flexible and mouldable black adhesive material that will never dry out or shrink. The built-in adhesive is strong enough to hold items such as track and ballast without the need for glue, screws or nails and can be used on practically any surface such as wood, plastic, foam and plaster.

ER-QUICK Track bed is easy to cut with scissors or with a pizza cutter. That is why it is so simple to adapt the HO ER-QUICK Track bed to many scales.

ER.5000
- Roll ER-QUICK Track Bed HO
10 m long, 5 cm wide, 3 mm thick

ER.5005
- ER-QUICK Turnout sheet HO/TT/N/Z
Sheet: 22,5 x 26,5 cm, 3 mm thick

ER-QUICK GLEISBETTUNG

THE BEST OF THE BEST AMONG THE TRACK BEDS

EXTRA SOUND-DEADENER

The ER-QUICK track bed itself has already a very good noise reduction.

For an SUPER-ideal noise insulation, ER-DECOR has considered the revolutionary anti-acoustic track bed in conjunction with the ER-Quick.

ER.5001

- EXTRA AA Sound-deadener
10 m long, 4 cm wide, 3 mm thick
To use with ER-Quick 5000 HO

ER.5006

- EXTRA AA Sound-deadener for Turnout sheet
To use with ER-Quick 5005 HO
Sheet: 22,5 x 26,5 cm, 3 mm thick

Other applications with ER-QUICK Track Bed

- **Wooden planking**
with ER-QUICK Track Bed

- **Cobble stones**
with ER-QUICK Track Bed

- **Concrete road**
with ER-QUICK Track Bed

- **Asphalt road with ER-QUICK**

ER-AA-TRACK BED

A REVOLUTION IN THE EVOLUTION OF TRACK BED SOUND-DEADENING

The revolutionary ER anti-acoustic (AA) track bed has one of the best sound-deadening properties of any of the existing track beds because of its construction in MICRO-CELL synthetic material.

Properties:

- ◆ proven micro-cell synthetics
- ◆ very high sound-deadening quality
- ◆ material won't dry out, harden or crumble
- ◆ easy and quick fixing
- ◆ very flexible
- ◆ easy to place for points and curves
- ◆ curves can be pre-shaped before fixing
- ◆ water resistant so unaffected by wet ballasting
- ◆ bed is in one piece (not 2 halves)
- ◆ easy to use 1 metre lengths

Laying track with ER anti-acoustic track bed

Laying track track bed is basically a four-step process.

1. Prepare the surface by marking out the desired position of the track.
2. Cut off a section of ER AA-track bed and fix it on the base board.
3. Place the track onto the ER AA track bed.
4. Cover the ER (AA) track bed with scale ballast.

ER.5020

- Roll AA-Track bed HO
compatible with 5 mm cork underlay
3 m length, 4 cm width, 5 mm thick

ER.5021

- Roll AA-Track bed HO
compatible with 5 mm cork underlay
10 m length, 4 cm width, 5 mm thick

ER.5025

- AA-Turnout sheet HO
compatible with 5 mm cork underlay,
40 x 25 cm, 5 mm thick

ER.5030

3 m length, 2 cm width, 3 mm thick

ER.5051

- Roll AA-Track bed N/HOe
10 m length, 2 cm width, 3 mm thick

ER.5055

- AA-Turnout sheet HO/TT/HOm
40 x 25 cm, 4 mm thick

ER-CORK TRACK BED

THE MOST COMMON OF THE TRACK BEDS

ER-Cork track bed is a fine grain natural cork bed. This composition gives very good flexibility and sound-deadening. ER-Cork track beds are available in lengths of 50 cm in various sizes and thicknesses for HO-TT-N.

The edges of the cork strips have a 45° edge to create realistic track bed shapes. The strips are very flexible due to a middle incision.

Easy and quick to fix when using ER-DECORAIL art.nr. ER.7215

Laying track with ER-Cork track bed

1. Prepare the surface by marking out the desired track position.
2. Fix the ER-Cork track bed on the board.
3. Fix the track onto the ER-Cork track bed.
4. Cover the ER-Cork track bed with scale ballast.

ER.5060

- Cork track bed H0
3 m length, 4 cm width, 4 mm thick

ER.5070

ER-DECOBAL

A REVOLUTION IN THE EVOLUTION OF TRACK BED SOUND-DEADENING

ER.7210
- DECORAIL AA-glue,
Bottle with drop applicator.

ANTI-ACOUSTIC (AA) BALLAST GLUE Sound-deadening latex glue to fix ballast

Using DECOBAL AA-glue is the perfect method for a perfect sound-deadening.

Properties: AA-glue DECOBAL

- ◆ Is a water soluble latex glue from our own development
- ◆ No adding of detergents
- ◆ It is a ready to use product and will giving every grain of ballast a latex layer
- ◆ Deadens the track noise in a big wayng
- ◆ Always stays elastic
- ◆ Can be used with natural stone ballast and imitation ballast
- ◆ Easy track salvage

ER.7211
- DECOBAL AA-glue,
Refill bottle, Contents: 500 ml

ER-DECORAIL

A REVOLUTION IN THE EVOLUTION OF TRACK BED SOUND-DEADENING

ANTI-ACOUSTIC (AA) TRACK GLUE Sound-deadening contact glue to fix track and track bed

Using AA-glue DECORAIL is the perfect method for a perfect sounddeadening.

Properties: AA-glue DECORAIL

- ◆ Is a water soluble and environmentally friendly contact glue from our own development
- ◆ Is a home-formulated contact glue designed to glue track bed and track
- ◆ It deadens the track noise significantly thus cutting out transmission of track noise between the track and baseboard
- ◆ By glueing track bed and track allows working without nails or screws
- ◆ Glue cork track bed and AA- track bed
- ◆ High flexibility stays always elastic
- ◆ Easy track salvage

ER.7215
- AA-glue DECORAIL
Bottle with dosage nozzle.
Contents: 250 ml

ER-BALLAST

LEIGHT WEIGHT BALLAST ON SCALE SIZE

ER-BALLAST is an imitation scale ballast which is very light weight. Thanks to the quality and realistic appearance of light weight ER- BALLAST it's almost indistinguishable from the much heavier stone ballast. This light weight is particularly useful for builders of modular layouts and is beloved by railway modellers.

ER-BALLAST is available in different sizes of granulation in a large colour range and several packaging. We deliver a range of basic colours to mix your own desired ballast colour and a range with pre-mixed realistic ballast colours.

By using ER-gluе DECOBAL and DECORAIL you can ensure 100% sound deadening quality. This method also assures that there are no problems salvaging the track and ballast at a later time if required (see ER-gluе).

ER-TUNNEL PORTALS

The ER-DECOR tunnel portals and walling have an extraordinarily realistic appearance. This is thanks to the production methods and the composition of the material, strength, thickness, shape and colours. ER-DECOR tunnel portals and walling are relatively unbreakable and can be used outdoors as well as indoors.

The material is easy to use and allows the model builder to saw, drill, polish and sand it. Each of these ER-DECOR tunnel portals or walls are already coloured during the production. Self colouring or weathering can be done with any popular hobby paint (Humbrol, Revell,...) or poster paint.

ER-DECOR tunnel portals or walls are partly handmade and coloured. Pieces with the same article number may vary with each other in size and in colour. All our tunnel portals are suitable for catenaries.

- Root bases for fir trees, 25 pc.

ER-HOBBY "O" WATER

"O"-Water is a one component liquid plastic casting PVC, available in three basic colours. Create water at an incredibly simplicity .

Ideal for static and moving water, for mountain rapids, rivers, canals, lakes, pools, ponds, drains etc. The operating procedure is simple: pour the "O"-Water and let it harden.

APPLICATION

"O"-Water as a membrane for large water surfaces

"O"-Water directly on the landscape as flowing water

"O"-Water directly on the landscape as sealant for real water

"O"-Water as glue

Coverage with the contents of a 120 ml bottle is about 8 dm²

ER.7500
- "O" Water clear,
Bottle: 120 ml

ER.7501
- "O" Water blue
Bottle: 120 ml

ER.7502
- "O" Water green
Bottle: 120 ml

ER.7504
- "O" Water grey
Bottle: 120 ml

ER.7505
- "O" Water brown
Bottle: 120 ml

ER.7503
- "O" Wasserset 3 Farben: Farblos, Blau, Grün
Flasche: 3 x 120 ml
- "O" Water set 3 colors: clear, blue, green
Bottle: 3 x 120 ml

ER-GRASS MATS

The ER-Decor grass mats are flocked with quality materials and are low priced. Due to the use of strong and flexible special paper they are easy to use. They are available on rolls in a variety of different sizes and lengths.

The grass mats are fixed on the layout with glue. We recommend our universal glue ER-DECOCOL white art.no. ER.7201 (720.500).

When using ER-DECOCOL the special paper becomes soft and flexible and makes fixing grass mats on an uneven surface an easy job.

Creation of a path, road, brook or stream

The glue used on the mats is water soluble. You can create roads, paths, tracks, brooks or streams. Just moisten the grass with a small brush in the desired shape and area and after a few minutes you can remove the grass with a spatula.

After drying, apply scatter material with glue to the cleared area to produce a path or road or apply an ER water product to create a brook or stream.

ER.1500

ER-WILD GRASS

Realistic grass, easy as 1 - 2 - 3

ER-REALITY WILD GRASS re-creates realistic grass clumps and grass strips with long grass fibres (6 mm high grass) on an invisible film.

These grass clumps and strips are useful along the sides of country roads, meadows, overgrown fields, along the water's edge, ditches, trenches, etc.

LONG GRASS CLUMPS

ER.1610
- Long grass clumps, H0
Spring green, +/- 100 pc.

ER.1611
- Long grass clumps, H0
Summer green, +/- 100 pc.

ER.1612
- Long grass clumps, H0
Summer brown, +/- 100 pc.

ER.1614
- Long grass clumps, H0
Late fall, +/- 100 pc.

LONG GRASS STRIPS

ER.1670
- Long grass strips, H0
Spring green, 72 cm

- Long grass strips, H0
Summer green, 72 cm

ER.1672
- Long grass strips, H0
Summer brown, 72 cm

ER.1674
- Long grass strips, H0
Late fall, 72 cm

ER-REED

Creating realistic reed beds is easy: just take the reed material, break off in small clumps and glue in place.

ER.2084
- Reed white

ER.2085
- Reed green

ER-GRASS FIBRES

The ER-DECOR synthetic grass fibres have the same colour material and texture as the ER-DECOR grass mats. These synthetic grass fibres are best fixed with our universal glue ER-DECOCOR green art.no. 7202 .

When using our ER-HYDROFIBRE modelling compound, no glue is needed to attach the grass flock on the wet modelling paste (see ER-HYDROFIBRE).

Application of grass fibres

The ER-DECOR synthetic grass fibres are already electrostatically charged during the production process. This gives the advantage that you don't need any special tools to allow the grass fibres to stand up just like real grass.

How to apply manually

Apply a water diluted amount of our universal glue ER-DECOCOR green art.no. 7202 and sprinkle the grass fibres in sufficient quantity on the glue. Sprinkling can be done by hand but it is better to use a kitchen sieve. This has the advantage that the grass fibres will be distributed more evenly on the surface. Next, gently tap the treated surface. The best way is to tap with hand or fist, close to the grass fibres, just under the treated area under the base. This allows a slight vibration causing the grass fibres to stand up because of their electrostatic charge.

How to apply with an electrostatic tool

Applying ER-DECOR grass fibres with an electrostatic tool is a simple pleasure. The already static charge in the grass fibres help and even improve the operation of the electrostatic tool.

ER-SCATTER MATERIAL

Landscaping adds colour, texture and realism to your terrain. With ER-DECOR scatter material you have the choice of three grain sizes: coarse, fine and extra fine. ER-DECOR scatter material is colourfast and of uniform grain size. Used for imitating earth, ground cover, plants, flowers and flowerbeds, fields, etc.

For fixing of scatter material we recommend our universal glue ER-DECOCOL white art.no. 7201 or universal glue ER-DECOCOR green art.no. 7202.

ER-LICHEN

This natural product is already a long time favourite of hobbyists. This lichen is specially treated to keep its natural elasticity. When combined with our scatter materials it produces a limitless variety of colours and textures.

The colours are designed to blend with our other ER-DECOR landscaping products to become a realistic effect. Three package sizes and several colours offer variety and economy.
